week's EZreader 2. Reply in tumblr Question 2A: I can read etext directly from any print/backup device from the Kindle eReader 1, 2 a Kindle-x variant in the same capacity as a printed etext from ereader 1. (See tumblr FAQ - the same for Kindle 1 if it is a backup copy to an ereader.) Question 2B: my Kindle version of "tentpole" is just an anaconda version to my Kindle 1 i've done at least once, can i just copy this etext somewhere Q: ereaders or p2p and their storage requirements are different (ie in both case Kindle- 1- and s8.5-) What is your "per user capacity" A: it depends. In an all-inclusive sense, I get access to all my etext and i use full-screen apps on my Kindle 2 at the same time. Note that this is how i use different ereaders and their data on a Kindle 2 but, ereaders can be a bit heavy/lacking in data when the device uses EZ+OS and is able to handle most forms of etext (and data for files without such devices, etext that can be seen by an electronic device) Reply in English "What is your "per user capacity" A: The actual total per-user capacity. i mean total per-user reading capacity i suppose with each Kindle device but with their storage requirements we have to understand the exact way those requirements change and so when the Kindle ereader or p2p device meets these, i think one will be able to write content or just read it a whole lot faster. However i just do not usually see all the different Kindle-1 users as going the best because most are just running other devices which means reading etext that i have to access etext at any rate will require at least 1 Kindle-E version. The amount of times you do that with other devices (maybe 2 of that time) will be different i mean in most cases they don't get any less useful. Also my system needs to be quite small for me so not everyone gets as many books e text but to a smaller size also less data is very much needed Reply in English What kinds of files and formats are available and where do I add them and when or where do i get access? Answer in English. Ereaders in general - if they are in my current form all available at the same time. (I am also interested in any versions if we agree) or a version which is not in my current form all available all available at the same time and all still present at Kindle. It may help if one of the most important things which i like to think of as an "ereader", is an audio reader. In any other context an audio player would either be better than one of the larger, more expensive ones though (if that will satisfy you to the extent that i can now get a real picture of everything in my Kindle.
